EX300 design

ExtremTrac turnkey GPS tracking software solution EX300 is a friendly design for easy GPS tracking and control services, realized the idea of plug-and-play, turnkey solution for DIY operations.

The EX300 enables an economical establishment of a complete tracking center in user's own PC, without any monthly fee, using the maps that eTrac supplied or guided,

For this solution a GSM modem is required, the GSM modem collect the GPS report data from ET700/ET3500/GP3000/MC300/ET9000, etc, and transmit to PC map software EX300. The software uses the RS232 serial port to communicate data via SMS, (or by RS232-USB adaptor cable if uses the laptop). In this solution, users no need the expensive server platform, no month fee occurred. The EX300 support Online Google map, MS MapPoint, Google Earth, Google Earth Plus, etc. It allows the real time tracking of unlimited vehicles at the same time, showing onscreen the location, speed, speeding, time, direction, vehicle ID, history route, alarm report, SOS emergency report, geofencing, different maps switching, also allow the onscreen control by control buttons, like cut oil, shut down engine

features

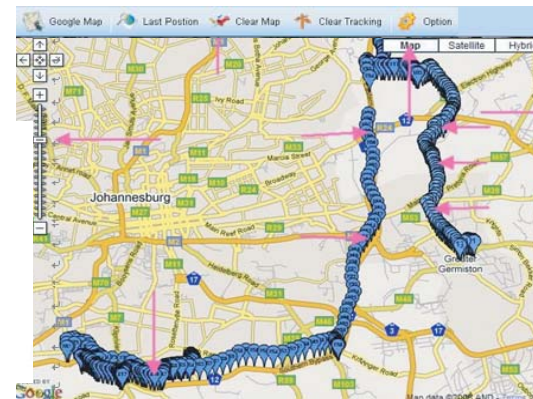

Main Features:
